

on the wrist of an individual or analogous portion of an object with the wristband having opposite extremities.

Further defined in claim 19 is securement means engagable with the opposite extremities of the wristband to maintain the wristband in the aforesaid operative relationship with the attachment means and being removable from said extremities when the wristband is discarded. Also defined is a radio frequency circuit means located in the securement means for re-use with said securement means in a replacement wristband when said wristband has been discarded.

Claim 20 is dependent upon claim 19 and incorporates the limitations thereof.

Claim 21 defines the radio frequency identification circuit means as being housed in the securement means and being removable with the securement means from the attachment means for subsequent use with replacement attachment means.

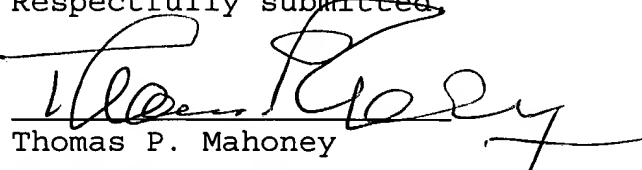

Claims 22, 23, and 24 embody modifications of claim 21 and incorporate the limitations thereof.

Claims 25, 26, and 27 are directed to the securement means, *per se*, as incorporating the radio frequency identification circuit means located therein and having securement portions engagable with opposite extremities of disposable attachment means.

Respectfully submitted,

Date:

2/23/99
